GREATEST GIFT OF ALL

EXCLUSIVE
By **Erin Cardiff** and **Nicola Small**

AT first glance it is just another snap of folk in their finery at a bit of a do. But everyone here is extraordinary – they have either received the gift of life or cared

for a tragic loved one whose organs have saved others. Their courage has resulted in 23 lives being saved.

These 22 heroes were united at a Gift of Life Ball organised by campaign group Share Your Wishes. Their aim is to promote the Organ Donation Bill, which is set to receive Royal Assent in days and will

make organ donation easier unless family legislation will be passed. Keira's brother, Max, is a patient on the waiting list for a heart transplant.

As Max and Keira law is set to be passed, here's everything you need to know about organ donation

Max and Keira's new law: How organ donation in England is expected to change

Primary Legislation

	Legal basis for consent/authorisation	
	Current	Future
England	Opt-In	Opt-Out
Scotland	Opt-In	Opt-Out
N. Ireland	Opt-In	Opt-In
Wales	Opt-Out	Opt-Out
Isle of Man	Opt-In	Opt-Out
Jersey	Opt-Out	Opt-Out
Guernsey	Opt-In	Opt-Out

Health Inequalities by numbers

40% - the consent rate of minority ethnic families agreeing to donate a loved ones organs (compared to 71% for white families) (Source: NHSBT ODT BAME report)

31% - the percentage of minority ethnic patients waiting for a transplant (UK population is only 18% minority ethnic) (Source: NHSBT ODT BAME report)

6 months - the additional length of time a minority ethnic patient waits for an organ transplant (Source: NHSBT ODT BAME report)

(1 April 2018 - 31 March 2023)**

2022/23 ORGAN DONATION AND TRANSPLANTATION

FOR BLACK, ASIAN, MIXED RACE AND ETHNIC MINORITY GROUPS

Percentage that are ethnic minority relative to the population

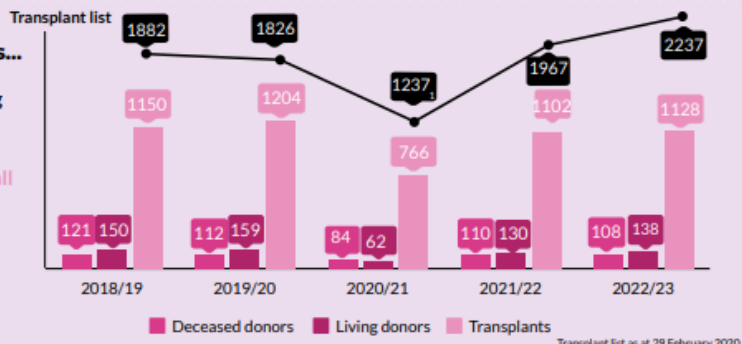

Outcome after one year of being listed for transplantation

Over the last 5 years...

- 19% increase in ethnic minority patients waiting on the list
- 2% fall in transplants for ethnic minority patients (all organs)
- 8% fall in ethnic minority living donors
- 11% fall in ethnic minority deceased organ donors

Progress Report for BAME Community Investment Scheme Initiative

2020

Summary of what was delivered through the BAME community investment scheme

Projects were delivered between November 2018 and end June 2019 with a few projects asking for, and being granted, short extensions.

Events and materials delivered

- 211 events
- 46 new videos, education materials, flyers or posters produced.

People reached

- 130,000 Approximate footfall at events where there was an organ donation stand
- 4,100 Approximate number of people who engaged in a conversation at a stand or who took away information materials
- 7,900 Approximate number of people attending a talk/workshop about donation.

Associated publicity

- 14 Approximate number of press releases issued by projects
- 65 Approximate number of broadcast media interviews secured involving people delivering projects
- 18 Approximate number of print articles secured involving people delivering projects

62,000 Approximate number of video views
244 mentions of organ donation on Twitter from organisations delivering projects, reaching over 750,000 people.

The support of the organisations funded through the first scheme has continued on social media. There were 97 mentions on social media, reaching over 350,000 people in the four months after the end of the projects

Actions taken

- 371 people pledged to have a conversation with their families about organ donation
- 909 people completed organ donor registration forms.

These figures are approximate and have been collated from the final project evaluation reports provided by the organisations.

Whilst we tried to encourage consistencies in reporting between projects as part of our evaluation process, not all metrics were provided by all projects. The figures above are therefore an underestimate of what was actually delivered.

The number of those not willing to donate decreased and we saw an increase in consideration of donation. In May 2018, **37%** of respondents told us that they definitely wouldn't donate their organs compared to **20%** in March 2019.

In March 2019, **43%** of respondents told us they would consider donating some of their organs compared to **30%** in May 2018.

Future events that SNODS/Students can help with

Organ donation in Black, Asian and ethnic minority communities

One donor can save or transform up to **nine lives** by donating organs

So much has been achieved...

The number of Black, Asian and minority ethnic deceased organ donors has increased by **67%** over the last 5 years

There has been an increase in **black deceased donors**, highlighting the hard work and dedication from the black community

But there's still work to be done

Black, Asian and minority ethnic patients are **over-represented** on the transplant waiting list. 3 in 10 people waiting are from a Black, Asian or minority ethnic background.

Black and Asian patients **wait longer** on average due to a shortage of organ donors, with Black patients waiting around 900 days and Asian patients waiting 736 days in comparison with 573 days for white patients

BAME families are **less likely** than white families to consent to organ donation when a relative dies (42.3% compared to 71.0%) as of 2019/20
